Class D Metal Fires

Have you ever seen anyone spray water on a metals fire? Look out! You're certain to get a fiery eruption of molten metals coming back at you. With Novacool UEF, you can now defeat a metal fire using the same foam you would use on your Class A & B Fires!

With the increasing use of metals such as magnesium in the manufacture of cars and trucks, putting out a Class D fire quickly and effectively has become much more important - ask anyone who has ever tried to put out a car fire when the car had a magnesium block! Novacool dramatically robs these fires of their heat, greatly increasing the effectiveness of plain water. In fact, Novacool is so effective at suppressing the heat from a magnesium fire that the ingots created from the fire become almost immediately cool to the touch.

Novacool is a remarkable advancement in the extinguishing of metal fires. No longer does one need to maintain costly, specialized extinguishers for this purpose. Novacool, with its ability to extinguish Classes A, B, D & K fires simplifies the whole fire fighting process by being able to use just this one foam. No longer does a first responder need to be concerned about the contents of the fire. Novacool will spare the first responder the agony of fingering out too late that flammable metals are involved. With Novacool, the problem is solved.

So Why Novacool UEF? 1. Dramatic and immediate COOLING of the fire site!
2. 70% faster extinguishment of the fire!
3. 90% lower water usage!
4. Most cost-effective fire suppressant on the market!
5. Extinguishes A, B, D and K fires and 3D fires; cools, blankets, and emulsifies surfaces; eliminates possibility of re-ignition.
6. Usable with injection, CAFS, or batch mixed; non-corrosive; no adverse effects on tanks, pumps, valves, and portioning equipment.
7. Works effectively when mixed with fresh, brackish, or sea water; eliminates run-off and water damage.
8. Non-toxic, biodegradable, UL Listed.
9. Manufactured entirely in the U.S.A.
